

Your Pre-Webinar Checklist

Keep this list nearby as you get ready for your first Parallel Lesson — a quick way to check you're covering the essentials, technical and pedagogical, before you go live.

Technical Essentials

☐ 1. Opening the console correctly

You know both ways to open it — via Schedule (30 minutes before) or your regular Groups list (60 minutes before, until the lesson ends) — and which one to use when.

☐ 2. Understanding the Parallel Group structure

You can explain that it's one container holding several individual student-groups, each with its own tracked attendance and projects — and that there are no WhatsApp groups in this format.

☐ 3. Knowing the timing structure

You know every student always gets a full 60 minutes, and that your own session stretches to fit the group — with welcomes and check-ins staggered roughly every 10 minutes.

Pedagogical Essentials

☐ 1. Taking notes on every student

One line per student, per check-in: task / mood / blocker / next check-in time. Written down beats remembered.

☐ 2. Keeping the lesson structure

You run the 8 stages — connection, mood, homework, goal, demo & feedback, wrap-up, reflection, homework announced — every time, not just when there's time left.

☐ 3. Promoting independence

You default to a question or a hint before an answer, so students build the coaching-not-answers habit this format depends on.

☐ 4. Managing your time across rotations

You triage by who actually needs you first — not by visiting in a fixed "fair" order — and you protect the closing beat even when time is tight.

☐ 5. Building a real connection with each student

You use specific, personal references instead of generic check-ins, so five students feel like five relationships, not one lesson repeated five times.

6. Giving effective, specific feedback

You name exactly what worked and what's next — "good job" alone doesn't answer any of the questions a student actually needs answered.

7. Reading emotional states

You catch a shift in tone, typing pace, or camera behavior early, and respond with empathy before logistics.

Self-Assessment

Can I open the console both ways without having to think about it?

Do I know the 8 lesson stages well enough to run them without checking notes?

When a student goes quiet, do I have a plan beyond just waiting?

Am I comfortable giving a hint instead of the answer when a student is stuck?

Do I have a simple note-taking habit I can actually keep up with live?

Could I explain, in my own words, why this format works for students ages 10+?
